### COMPANY PROFILE

BTESA (Broad Telecom S.A.) is a Spanish company, having a solid background and more than 25 years experience in broadcasting, which designs and manufactures Analogue and Digital TV transmitters and DAB transmitters.

During the last years, with the help of its dynamic R&D laboratory, BTESA has been developing its range of solutions, which now include gap-fillers up to 100 Wrms and liquid cooled transmitters up to 40kW in analogue and 12kW in Digital. These transmitters are distinguished by its high redundancy, hot-pluggable modules and robust surge protections. And, as all the other range of BTESA transmitters, liquid cooled transmitters can be remote controlled and supervised by PC, either alone or integrated in BTESA's supervision system.

BTESA holds an impressive supply record of completed systems projects: designing, installing radio and TV studio facilities for many broadcasters and events. O.B. vans, TV transmitter stations and networks have also been part of their performance.

BTESA transmitters had been successfully installed in countries with severe climates such as Vietnam, Nepal, Indonesia, Sri Lanka, Angola, Mali, Egypt, Panama, Dominican Republic, Cuba, Mexico or Colombia.. BTESA worldwide presence shows the customers' confidence in our products and services.

### PRODUCTS

Digital TV Transmitters and Gap Fillers.

Liquid-Cooled Dual-mode TV Transmitters
