COMPANY PROFILE

CompeGPS Team develops software for digital map viewing and GPS navigation since 2001, creating applications for outdoor trip management (hiking, mountain biking, 4X4, paragliding, etc.) for PC, PDA and mobile phone. We recently developed TwoNav, which adds all functions of the typical road navigators to the traditional 'Off-road' capabilities. Twonav is marketed as software (for Pocket PC, mobile phone and PC/UMPC/TabletPC) and soon also with several hardware options. Our applications are supplemented by a comprehensive catalogue of topographic maps from around the world.

Our products are mature to have success in any market we have maps available, so we are interested in finding distributors for these countries and also partners to help finding maps and distribution channels in other countries.
