DS2 is the leading technology innovator and a global provider of high-speed semiconductor solutions for Powerline Communications and other wire-line network communications products. Led by a very strong team of former executives from IBM, AT&T/Bell-Labs, INTEL, Philips Semiconductors, France Telecom, Ericsson and Cisco, we deliver state-of-the-art ICs and software solutions to manufacturers of consumer electronics, home networking and digital entertainment equipment and broadband access products. DS2 invented high-speed Powerline Communications delivering the first 200 Mbps Powerline Communications IC to enable quality multimedia home networking, networked entertainment and broadband access applications to and throughout the home, office, or building, and to and throughout urban and rural communities. Enabling the hidden multimedia network behind the power outlet is the purpose of DS2. Our mission is to connect the Planet.
