COMPANY PROFILE

With eXternalTest you can monitor your servers and online services in less than 3 minutes, with no software installation.

Monitor your servers

Know if your site goes down with configurable alerts

Get customizable reports of access times from different points on the globe.

How long has your server been down without you knowing? What are your server's response times at different times of the day and to users in different countries?

Servers' performance and malfunctioning are an important cause of lost clients and revenues. For example, in most of the cases, there is a strong correlation between response times and the number of transactions completed in the website.
