### **COMPANY PROFILE**

The origins of Itelsis date from 1989, when a group of professionals led and developed an innovative project within the professional telecommunications sector oriented entirely toward the customer. Its activity included the design, manufacture and installation of products for television transmission and reception as well as the integration of telecommunications equipment. Our beginnings and involvement (first as Televés Sistemas and then as Itelsis) coincided with the deployment by Retevisión of coverage for the private television channels, and from that moment on we have not stopped working on projects that have provided the company a recognised and deserved level of prestige in the sector. And now, with the challenges offered by the deployment of Digital Television and universal wideband services, Itelsis has continued the journey focusing on the Audiovisual and Broadcast segment, bringing along all our experience in the world of telecommunications services such as engineering, installation and maintenance of systems and applications.

### **Products:**

- Gap-filler (MRTVD series)
- Agile Digital Transposer
- Agile Digital Exciter
- SNMP Agent
- UMTS Repeater

### **OBJECTIVES FOR IBC 2007**

ITELSIS assesses to our customers in their new projects doing the network planning, a detailed engineering for installations and the preventive and corrective maintenance. Therefore, we can deliver turn-key projects according to our customer needs.
