COMPANY PROFILE

PROMAX was founded in 1963 by Jose Clotet in Barcelona. The company's first developments included instruments to generate television and radio signals and analysers to check the reception quality. Today, PROMAX is a leading company in providing test and measurement solutions worldwide to support the information technology revolution. The company invests about 15% of its annual turnover in Research & Development.

Products:

- Tv Explorer
- DiSEqC

OBJECTIVES FOR IBC 2007

To present/the DiSEqCTM (Digital Satellite Equipment Control) is an open protocol created by Eutelsat in 1997 like standard of communication between the receivers of TV by satellite and peripheral the external ones. The DiSEqCTM communications are based on the commandos of control who travel the feeding tension along with, through coaxial cable that takes the TV signal. The compatible peripheral receivers and detect these commandos and react in agreement with such. A DiSEqCTM commando is a digital commando represented by a succession of binary messages "0" and "1" obtained modulating of a certain way the 22 signal of kHz. The DiSEqCTM habitually is used in the facilities of TV by satellite to use different types from commutators, through coaxial cable that takes the TV signal.
