### **COMPANY PROFILE**

SAPEC was founded as a complete Spanish capital corporation in 1976, focused on development, manufacture and installation of piped music and wirebroadcasting. At the end of the nineties, continuing with its constant evolution philosophy, SAPEC decided to make a big capital investment in its Research and Development (R & D) department. The purpose was to improve our department capacity in order to create new high quality and competitive products for the telecommunications market. As a result, our customers will get better products with better after sales service. So, SAPEC has specialized in MPEG encoding Systems, manufacturing a set of products that represent an improvement in the company's activity, while still offering and evolving its original products.

#### **Products:**

- SIVAC is a MPEG2 professional encoders and decoders family designed for television signal transmission. All the SIVAC equipments offer the best quality signal transmitted through PDH as well as through DVB-ASI.

### **OBJECTIVES FOR IBC 2007**

To present SAPEC'S products and particular to send to European market SIVAC and thus to be able to settle down in the international market.
