COMPANY PROFILE

TEDIAL is the result of the union of professional experiences around a group of PhD researchers, with a precise knowledge of the latest technological advances related to the audiovisual information systems, and with an ample experience in consultancy and product development as well as in national and European projects. TEDIAL focuses its work on the design of R&D&I products in the audiovisual technology sector, as well as in the development and marketing of technologically advanced products, that serve as reference in the convergence of digital technologies. We try to contribute solutions in the value added chain of the Information Society. TEDIAL has developed a software for the complete management of audiovisual information: digitalization, cataloguing and archiving. This software represents a substantial advance in the development and the implantation of audiovisual digital technologies. It reduces the costs of information conversion, and includes tools for automatic indexing and cataloguing. These tools facilitate the access to the audiovisual material, and the remote publication and fast edition of multimedia information in all the economic sectors.

Products:

- TD Media Process Manager.
- TD Indexer.
- TD Media Solver.
- TD AST
- TD Tarsys MAM.

OBJECTIVES FOR IBC 2007

TEDIAL focuses on Amsterdam where will take place, as every year, the greatest European broadcast event, IBC 2007, from September 7th to 11th. Tedral will show the new versions of its products, all of them related to the management of audiovisual contents.
