COMPANY PROFILE

Teltronic design and manufacture of radio communication equipment and systems. The main markets addressed by Teltronic are Emergency and Security Forces, Public Transport Companies, Utilities, PAMR operators and other private customers. Teltronic's portfolio includes the TETRA NEBULA® infrastructure, based on the Tetra over Ethernet/IP concept, a 2nd generation Tetra mobile with GPS and GSM capabilities and last generation display, TETRA handportables, desktop dispatchers unit and dispatching centres with a digital switch which allows VoIP operation as well as interfacing with other radio networks (conventional, MPT-1327, GSM) and telephone networks (ISDN, PBX, etc.,).

NEBULA® does not need synchronous communication means to link the Base Stations with the Central Node Controllers, nor any GPS synchronization for full TETRA operation up to Type 3 handover. NEBULA® is TETRA over your corporate LAN/WAN.
