COMPANY PROFILE

WIRELESS MUNDI has a vast experience in the Information & Communication Technologies field and provides voice and data communications solutions that help companies to achieve marketplace advantage.

WIRELESS MUNDI is specialized in manufacturing and development of products aimed to provide unified communications (voice, data and IT services) for Small and Medium Companies. These products are marketed through a network of value-added integrators and wholesale dealers.

Our main product, COMMS MUNDI, is an integrated communication centre based in an innovative concept and architecture that not have any worldwide equivalent. It integrates in an unique equipment a set of functions and technologies that assure the convergence of telephony services, data routing, protection against threats, electronic mail, file server, Web services, virtual servers, monitoring, ...

PRODUCT DESCRIPTION

COMMS MUNDI is one of the most advanced, integrated and powerful solution of unified communications, also known as Multi-Service Business Gateways (MSBG). It integrates in a single HW platform an impressive set of modules which can be activated or deactivated in an independent way in order to provide the precise functionality required by their users. They are grouped in five technologies: telephony services (voice and videoconferencing), advanced data communication functions (router, firewall, proxy, load balancer, traffic shaper, dynamic DNS, DHCP, ...), protection against threats (Unified Threat Management system, which include

firewalling, IDS, VPN, certificates management, Proxy, Antivirus, Antispam, captive portal, ...), business services (mail server, file server, Web server, virtual servers, call center, ...) and a powerful monitoring system within a unified and easy-to-use management system. All modules are close interconnected, offering a real integration of technologies and new and empowered functions. Business services core offers an advanced platform that allows the integration of new advanced services.

OBJECTIVES FOR CEBIT 2008

The objectives of our participation in the CeBIT 2008 showcase is to present internationally our leading product COMMS MUNDI in order to look for agreements with value-added resellers (specialized wholesale dealers), carriers looking for an advanced communication platform and partners for its worldwide commercialization and distribution.
